

Aquafilm

**forms a protective barrier
throughout the entire system.**

Aquafilm products include an innovative filming technology that provides protection for boiler applications. Filming agents effectively reduce corrosion and scaling by creating a barrier between the water and metal surfaces in your system.

Protect your systems from scale and corrosion with Aquafilm.

KEY FEATURES

- Forms an ultra-thin protective surface barrier on all metal surfaces to prevent corrosion and scaling.
- Replaces up to 3 traditional chemistries with its all-in-one organic formula, and allows for safer handling.
- Gradually loosens and lifts existing scale and prevents new deposits.
- Improves heat transfer, lowering energy costs.
- Improves condensate quality, lowering blowdown frequency.
- No mixing or diluting – reduces operator involvement by up to 80%.
- Reduces maintenance costs and prolongs equipment life.
- Simplifies water testing.

**SAFE AND EFFECTIVE
PROTECTION FOR:**

**STEAM
BOILERS**

**Aquafilm is a
cost effective,
high-performance
technology for
complete system
protection.**
