

An efficient cooling water system is about more than preventing scale and corrosion.

Did you know cooling water is possibly the single largest volume of water used in your facility, allowing you to leverage many cost-saving opportunities? Watertech's cooling water treatment programs include the ideal blend of inhibitors, micro biocides, and dispersants. Combine that with our recommended training, support and automation and you will see a savings of time and money in addition to protecting your public health and safety liability.

A SMOOTH RUNNING SYSTEM HAS A POSITIVE IMPACT ON:

- Maintenance costs
- Reduced Legionella risk
- Production time
- Equipment life
- Energy conservation

Better water management improves heat transfer, reduces water usage, extends equipment life and protects against health and safety liabilities.

SERVICE. CHEMISTRY. MONITORING. ANALYTICS.

Chemicals

- Scale Inhibitors
- Corrosion Inhibitors
- Biocides
- Closed Loop Treatments
- Anti-foams and Defoamers
- Cleaners
- Dispersants
- Envirodose™
- Polyamines

Services

- Legionella Control & Prevention
- Water Management Plans
- Laboratory Support
- Onsite Analysis
- Corrosion & Deposit Monitoring
- Microbiological Testing
- WTLINK Remote Monitoring
- Freedom Plus Hands-Free Delivery

Equipment

- Chemical Control & Feed
- Pretreatment
- Installation & Service
- Monitoring
- POU/POE Filtration
- Metering & Data Acquisition
