

CASE STUDY

RESULTS

The *Pulse-Pure*® program has maintained a system free of scale, biological contaminants and corrosion for 5 years, while generating considerable savings.

Pulse~Pure's chemical-free technology resulted in:

- Improved reliability - consistent treatment that does not rely on chemical feed pumps
- Reduced chemical cost
- Improved safety and liability
- Met discharge regulations, avoided additional treatment costs
- Reduced carbon footprint

TOTAL SAVINGS

\$44K
annually

(14K water treatment savings
+ \$30K by discharging to
the pond and avoiding waste
treatment)

CHALLENGE

A commercial real estate firm with access to a nearby pond, wanted to discharge water to the pond to avoid costly wastewater treatment.

SOLUTION

After researching various solutions the company went with EVAPCO's *Pulse~Pure*, a chemical-free technology. EVAPCO's *Pulse~Pure*® system utilizes *pulsed-power technology* to control scale, corrosion and microbiological growth. Since the system does not use chemicals, there are no harmful byproducts, providing an easy, safe and sustainable solution.

More than a water treatment solution.
